

## **The story: Revolt of Future Giraffe**

I am a scientist and my creation is a “future Giraffe” that doesn't have a name yet, but it's gonna have a name, a beautiful name. Some characteristics are, this new giraffe has a diet based on meat and fruits or leaves. He is an animal who lives alone but looks for the female at the time of reproduction. The animal that he likes to eat is the birds because birds stay in tree branches and with the long neck of the new giraffe he can take the birds in the tree branches and the favorite fruit is the apples.

In the beginning of the hunt I note things a little strange, that is the Giraffe can talk with me! And he speak to me that he is vegan and don't eat animals, and I told to him:

-But I created you to eat animals and eat fruits or leaves, you have to eat animals too. You are a carnivore!

And he said:

-But I am vegan, I don't eat meat. I feel sad when animals die and so I don't eat more meat.

I told to him:

-Giraffe I created this forest for you to hunt and test your abilities with. I've spent my whole life doing this project and you tell me that you don't eat meat? Oh my god.

So I ended up giving up.

But I have another idea, I'm gonna create another future giraffe with the same technique but when I took the formula I saw something wrong so I did it right and made another future giraffe a little bit different than the other. I put he in the forest with the other and he hunt the bird but the other future giraffe stopped he to hunt and say:

-Are you crazy you can't eat other animals, you have to be vegan like me!

Future giraffe 2 said:

-But I like to eat animals. I'm a carnivore and I like meat.

Future giraffe 1:

-Imagine the animal has a family and friends. You don't wanna kill him if you can eat some leaves or fruits.

Future giraffe 2:

-You are correct, then I'm gonna be vegan and eat fruits and leaves.

Scientist:

-I don't believe that...Guys I created you to eat animals you are carnivore and have to eat animals or meat.

Future giraffe 1 and future giraffe 2 say at the same time:

-But now we are vegan, never mind we are gonna eat some meat!

So I agreed with them and the species is gonna be vegan, but to do it I have to study a lot of things to change it. I have to study fossil records of Samotherium, which is the ancestor of giraffes, to know what is the format of this animal and its diversity. Is important to study diversity because the species has to adapt with the environment and the climate of the location that he is going to live. I have to study the extinction to know the purpose of Samotherium being extinct and I have to know the speciation of the new species that is the "Future Giraffe"( no name yet) that I created.

Now I put the embryo in a location that he can develop to stage I, II,III and turn into a baby future giraffe and go to the environment to live and procreate the species. Finally I got the formula of the Future Giraffe that now has a name that is "Giraffites" and is herbivore not carnivore.

**THE END.**
